Skills

Languages: Python, JavaScript, SQL

Frontend: React, Vite, HTML, CSS

Backend: Django, FastAPI, REST APIs

Databases: PostgreSQL, PostGIS, DuckDB

WebGIS & Mapping: Leaflet, GeoServer, OGC services (WMS, WMTS, WFS), GeoJSON, GDAL, QGIS

Infrastructure & Tools: Docker, Docker Compose, NGINX, GitHub Actions, CI/CD, Git

Experience

Software Engineer, AlongWave, Greece (Hybrid)

May 2025 – Present

- Developed a React/Vite WebGIS frontend for oceanographic forecast data products, combining time-enabled WMS layers and custom Mantine UI components for interactive forecast visualization
- Implemented WebGL particle animations to visualize dynamic speed and direction fields from forecast data layers
- Implemented Django backend services for authentication, forecast-layer metadata, timestamped tile delivery, GeoServer/WMS proxying and protected access to oceanographic forecast layers
- Built a FastAPI forecast web service for querying oceanographic forecast data by coordinates, time range, and variables, including nearest-grid lookup and API-key validation
- Developed Python data pipelines to download, process, cache, and prepare oceanographic forecast datasets into map-ready layers and visualization outputs
- Configured Docker Compose, NGINX, and GitHub Actions CI/CD workflows for QA and production deployments on Linux servers

Associate Researcher, School of Biology (AUTH), Greece (Hybrid)

May 2024 – March 2025

- Research on the application of geoinformatics & remote sensing on spatial ecology

Forester, Forestry Office of Nikos Papadopoulos, Greece

May 2022 – September 2023

- Supported urban forestry and field operations

Associate Researcher, School of Forestry (AUTH), Greece

June 2019 – June 2021

- Collected, organized, and documented forestry datasets for urban forestry management

Projects

Thessaloniki Transport Accessibility WebGIS

skgtransport.app

- Built and deployed a full-stack WebGIS app for public transport accessibility analysis in Thessaloniki
- Developed FastAPI endpoints that query PostgreSQL/PostGIS and return geospatial layers as GeoJSON
- Applied walking-network analysis to evaluate access from buildings to nearby public transport stops
- Containerized and deployed the application using Docker and NGINX on a Linux server

Education

Master of Science in Ecology and Conservation Biology, School of Biology (AUTH), Greece

Grade: Excellent, 9.72

June 2025

Integrated Master in Forestry and Natural Environment, School of Forestry (AUTH), Greece

Grade: Very Good, 6.65

June 2021
